Feeder Watchers Report Observation time (to half hours): _____ Address/Location of feeder: _____
--

Notes: Include *large* flock movements in and out of your territory (geese, cranes, ducks on river, pelicans, or swans). Note any counted Bald Eagles moving to and from your territory. Include time, number, and direction for these movements. Any other comments you would like to make? Thank you!

Bald Eagles: 2 adults around nest site on east bank of Lake River between Hunt Club and mouth of the river. One immature observed on east side of Lake River around 10:30 am upstream of Hunt Club. Remainder of Bald Eagles were on Bachelor Island or north tip of River S Unit near confluence of Bachelor Island Slough with Lake River.

We didn't count any geese or swans just flying over without landing on Bachelor Island. Birds within our territory seemed pretty secure and didn't move a lot unless disturbed by a Bald Eagle flying over and then they tended to fly up, circle around and return to feeding in the same locations in the interior of the island rather than moving off the island.
